"Dub. Sequence analysis of the photosynthesis region of Rhodobacter sphaerorides 2.4.1.";

Nucleic Acids Res. 28:862-867(2000).

-!- FUNCTION: This enzyme converts phytoene into zeta-carotene via intermediary of phytofluene by the symmetrical introduction of double bonds at the C-11 and C-11, positions of phytoene.

-!- COPACTOR: FAD (Probable).

-!- CAPACTOR: FAD (Probable).

-!- PATHMAX: Carotenoid biosynthesis.

-!- SIMILARITY: Belongs to the phytoene dehydrogenase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              InterPro; IPR002937; Amino oxidase.

"Conserved enzymes mediate the early reactions of carotenoid
"Conserved enzymes mediate the early responsible blosynthesis in nonphotosynthetic and photosynthetic prokaryotes.";
Proc. Natl. Acad. Sci. U.S.A. 87:9975-9979(1990).
-!- PUNCTION: This enzyme converts phytoene into lycopene via the intermediarises of phytofiluene, zeta-carotene and neurosporene by the introduction of four double bonds.
-!- CORACTOR: FAD (Probable).
-!- SUMILARITY: Belongs to the phytoene dehydrogenase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                            FUNCTION: This enzyme converts phytoene into zeta-carotene via intermediary of phytofluene by the symmetrical introduction of double bonds at the C-11 and C-11' positions of phytoene. COFACTOR: FAD (Probable).
PATHWAY: Carotenoid biosynthesis. SIMILARITY: Belongs to the phytoene dehydrogenase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     InterPro; IPR002937; Amino oxidase.

Bartley G.E., Schnidhauser T.J., Yanofsky C., Scolnik P.A.;
Carotenoid desaturases from Rhodobacter capsulatus and Neurospora crassa are structurally and functionally conserved and contain domains bomologous to flavoprotein disulfide oxidoreductases.";
J. Biol. Chem. 265:16020-16024(1990).
-!- FUNCTION: This enzyme converts phytoene into zeta-carotene via the intermediary of phytofluene by the symmetrical introduction of two double bonds at the C-11 and C-11' positions of phytoene.
-!- COFACTOR: FAD (Probable).
-!- PATHWAY: Carotenoid and chlorophyll biosynthesis.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 17. Application US/09091725

Patent No. 6329141

GENERAL INFORMATION:

APPLICANT:

TITLE OF INVENTION: Improved methods for transforming Phaffia TITLE OF INVENTION: and recombinant DNA for use therein NUMBER OF SEQUENCES: 51

CORRESPONDENCE ADDRESS: 51

CORRESPONDENCE ADDRESS: 51

CORRESPONDENCE ADDRESS: 51

CORRESPONDENCE ADDRESS: 52

COUNTRY: Washington FINE FORM: N.W.

STATE: DC

COUNTRY: United States of America ZIP: 2000 Pennsylvania Avenue, N.W.

CITY: Washington STATE: DC

COUNTRY: United States of America ZIP: 2000 Pennsylvania Avenue, N.W.

SIATE: DC

COUNTRY: United States of America ZIP: 2000 Pennsylvania Avenue, N.W.

COMPUTER: INB PC Compatible OPERATING SYSTEM: PC-DOS/MS-DOS SOFTWARE: Patentin Release #1.0, version #1.25 (BPO)

CURRENT APPLICATION UNBER: US/09/091,725

FILING DATE: 11-APR-1996

APPLICATION NUMBER: BP 95203620.0

FILING DATE: 11-APR-1996

ATTORNEY AGENT INPORMATION:

NAME: B. Victor Donahue

SEGISTATION NUMBER: 32-DEC-1995
